

GLASPROTECT

PROTECTIVE FILM FOR ARCHITECTURAL GLASS

Vitrum Glass Group is proud to introduce GlasProtect — an innovative, game-changing solution designed to safeguard architectural glass throughout transportation, installation, and construction. GlasProtect provides a durable barrier against damage from construction debris, weather exposure, and on-site contaminants while the project is still underway.

WHY CHOOSE GLASPROTECT?

- 01** Comprehensive protection in the shop, during transport, and on-site
- 02** Shields glass from cement splatter, silicone spotting, grinding sparks, paint overspray, and more
- 03** Clear film maintains natural light transmission during construction
- 04** Reduces or eliminates the need for post-construction glass cleaning

GlasProtect is compatible with both monolithic and insulating glass units (IGUs) and is carefully engineered not to damage existing coatings. For IGUs, the protective film set back can be specified as per glazing requirement to yield the maximum amount of surface area without interfering with the glazing system. The protective film set back will be equal on all four sides and allows for clean, easy removal with no visible residue left behind. The film can also be applied to both sides of the IGU for added protection. GlasProtect is machine-applied, ensuring consistent coverage without adding extra handling or labor to the process.

GlasProtect is suitable for a wide range of applications, including doors, windows, railings, shower enclosures, and more. Reach out to your Vitrum Sales Representative for more information.

	MINIMUM	MAXIMUM
SIZE	10" x 12" 254mm x 305mm	96" x 120" 2438mm x 3048mm
IGU UNIT THICKNESS	½" 12.7mm	1 ½" 38.1mm
MONOLITHIC GLASS THICKNESS	3mm	10mm
FILM CUTBACK FROM EDGE OF IGU	5/8"	Cutback tolerance = ±1/8"

*SQUARE OR RECTANGULAR GLASS ONLY
